# ORIAL

— COMMITTED TO FUTURE —

## Who we are

If you are looking for a company that is doing its best to succeed your project with a specialized programming team you will find here your partners in success

Over 6 years of experience in software, providing consultations, ideas, and problem-solving with a highly experienced and efficient support team. We use the latest technology to create smooth and intuitive software and permanently improve our service so that our clients can stay ahead of the competition. We are always keen to work continuously and provide our services to all private and government sectors.

## Our vision

is to achieve success in our projects and continuously develop our capabilities and thinking. We consider ourselves to be owners of a project and not only a specialized development team.

## Our mission

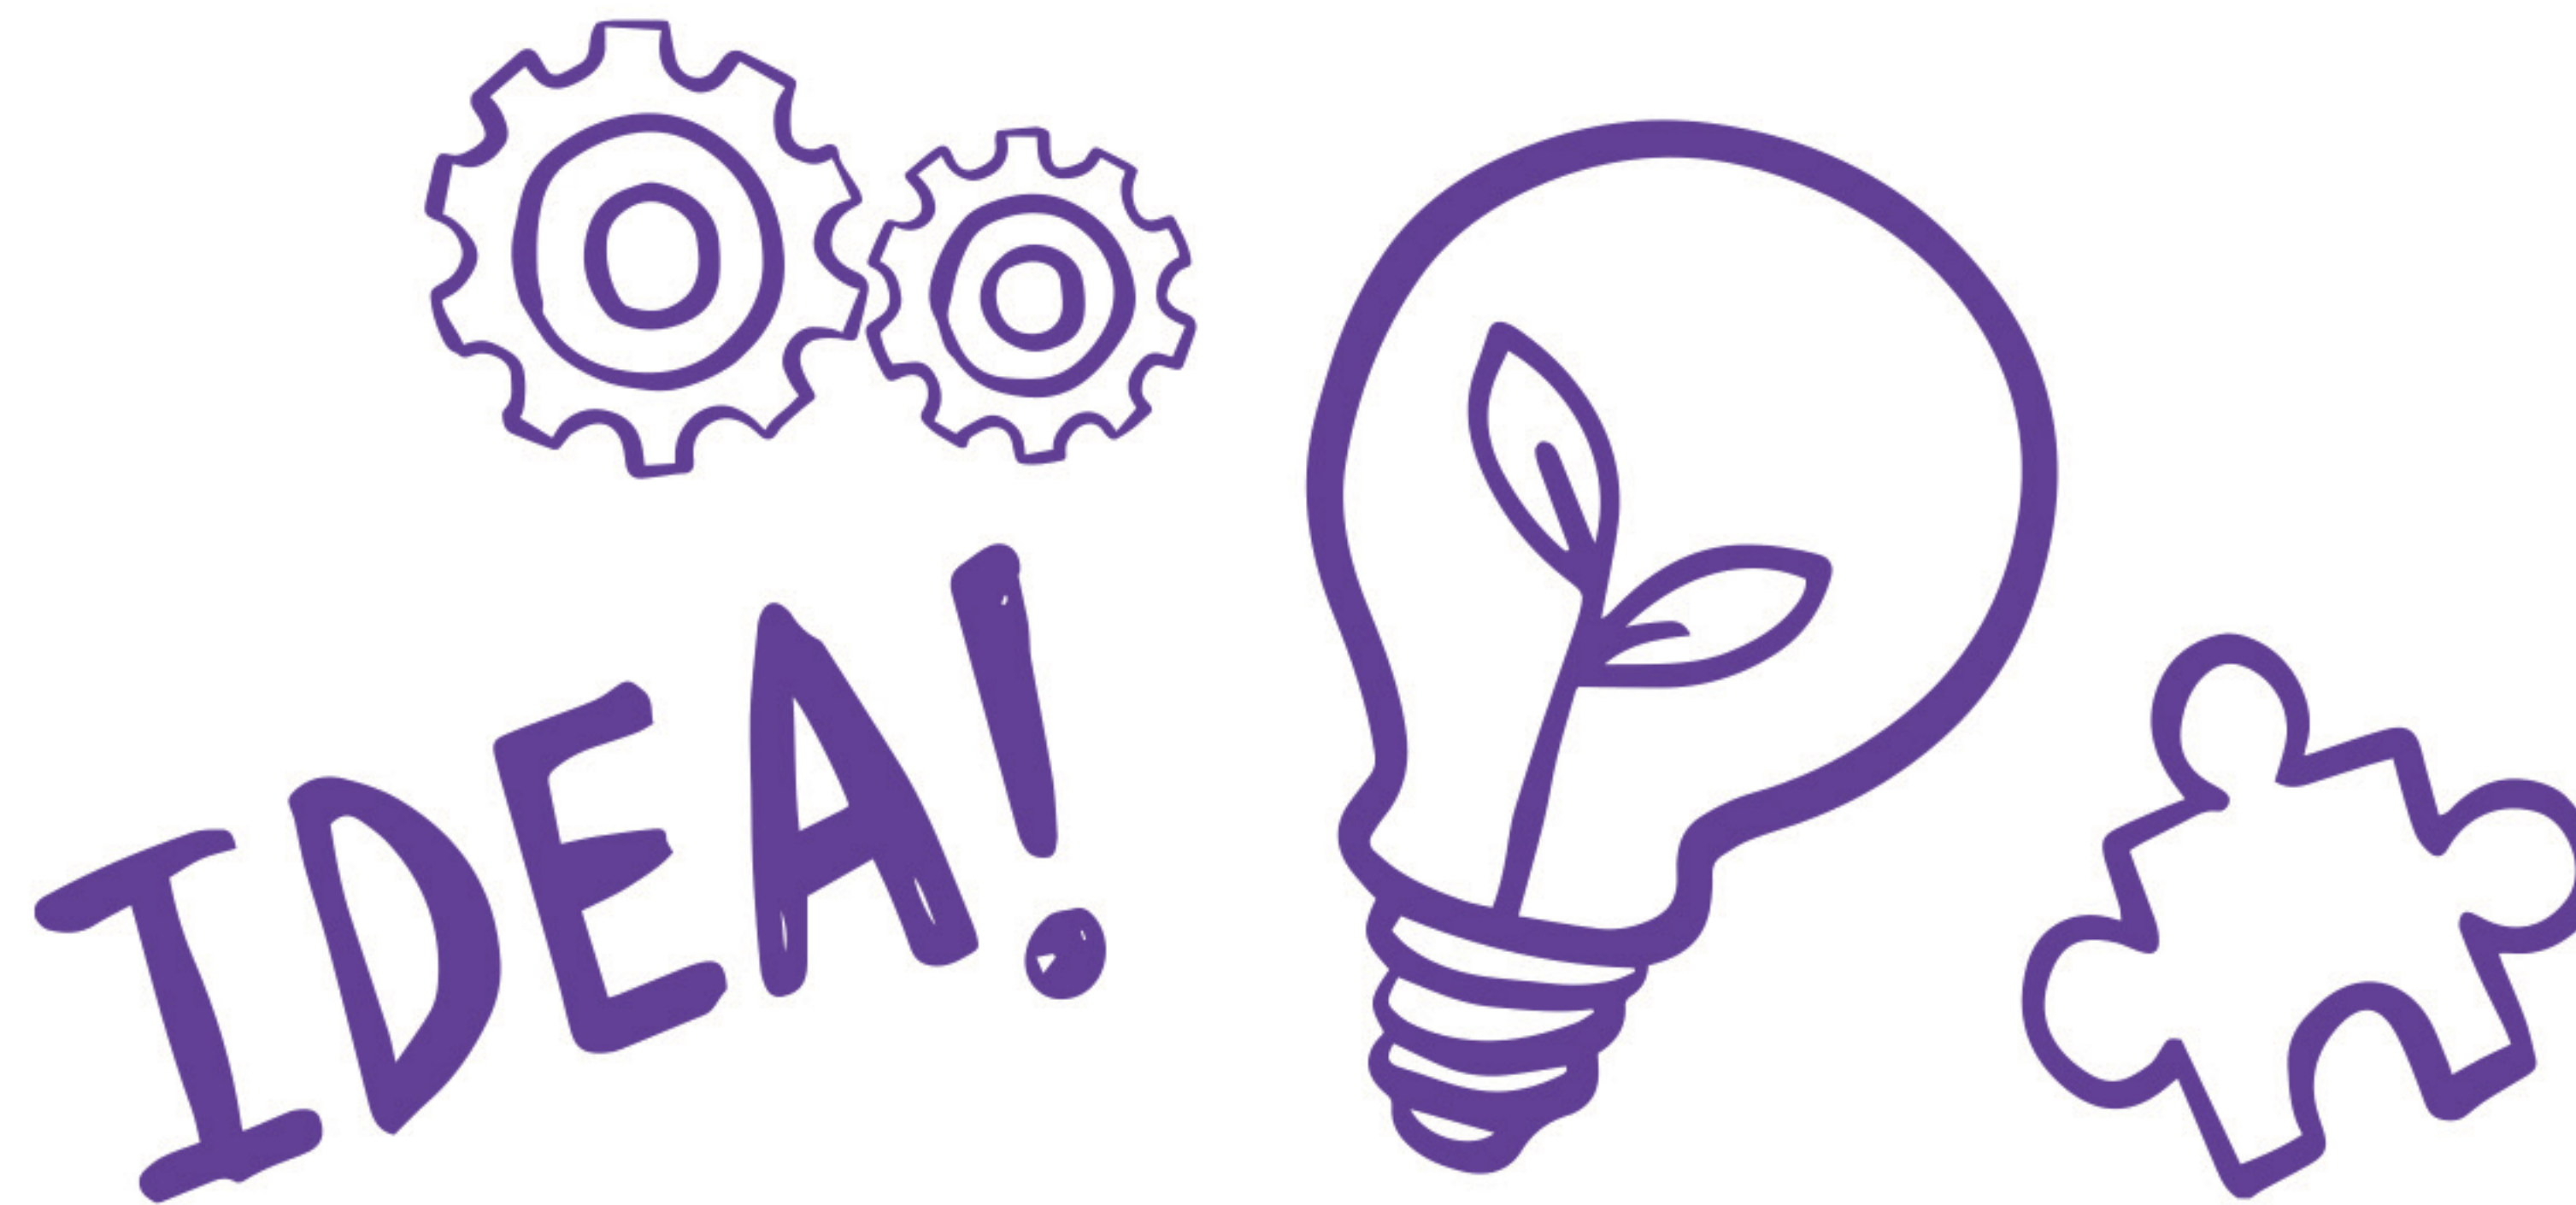

is to develop, design and execute projects efficiently and commit to fulfilling the requirements of the customer's vision in their website or phone application.

## Our goal

We strive to get our name up in the Middle East in full and provide our service at the world level.

## **Our thought and Slogan**

We create the future by making your own future with us because for years we design and develop the software business through innovation, excellence and work to make this unusually different and achieve the desired goal of success.

WWW

## Web Design & Development

We build premium websites with solutions that allow high performance and ease of use for all our customers.

Create a unique and easy-to-use website

Provide solutions to increase access to your customers

Programming the site and control panel to suit your needs.

The possibility of adding different electronic payment gates

24-hour technical support service

## Business Systems Development

For the success of an organization, all enterprise data must be located in the ERP system to provide sources of all business and make budgets and receive reports from your company departments. All sections of accounts, purchases, stores, sales, human resources management and others are linked so that you can easily see all this.

Increased  
productivity

Improved  
flexibility

Risk  
Reduction

Quick  
Reports

Deepening  
Visibility

# Development of virtual and augmented reality applications

Through this service, which is a powerful shift in the field of modern and non-pervasive technology in the Arab world, we can provide you with a three-dimensional future vision of what your project will become through VR and augmented glasses to display 3D images, videos and themes in order to create a completely similar virtual environment for reality in which our customers can fully live the experience between tangible reality and virtual elements and also used in the medical, engineering and educational fields.

## They can also be used in

- Design Fashion Shows
- Design reality in conferences
- Tourism companies
- Various medical fields of medicine
- Marketing and electronic commerce

## Hologram systems Development

Hologram technology now has a positive role in various fields in terms of increasing the supply of products in a new and innovative non-traditional way. This helps to attract the attention of customers creatively and undoubtedly leads to increased sales and profits. For this, we manufacture various sizes and forms of hologram hardware on demand from fans, boxes or pyramids, and ordinary hologram boxes.

## Games Design and development

We have experience in game development for all kinds of systems while using many modern tools to create the best experiences so we provide creative solutions to develop more professional games

Game design  
using the Unity  
engine

Development of  
Android Games

Development of  
IOS games

Development of  
2D and 3D games

## Editing Video

Video editing refers to the process of producing the final subject from the video processing material and rearranging the creation of a final video product. Strong and professional video editing is important and necessary in all areas and all sectors regardless of the nature of each field's work and can be used to promote business activity or display ideas and information

We do all kinds of video editing and ensure that the results will exceed your expectations because we are constantly developing our work so that professional videos are produced so that the desired goals are achieved.

## Motion Graphic

Motion Graphic is one of the most effective ways currently in electronic marketing and promotion of commercial activities and goods. It helps to describe the product and explains the services it will provide to the customer and the design is in a professional, attractive, and innovative manner. All of this certainly encourages customers more to purchase even though it may not exceed a few minutes from the product but it is enough to clarify and define the products in a professional and compelling manner.

One of the steps we can take is to reflect all your ideas in a professional, attractive and enjoyable way for the public, so we are working to provide programs and videos in a professional way that fits different products and services.

## UI UX

User interface design and user experience services with the aim of providing an excellent finished product in a timely manner. We provide innovative design services for the user interface and user experience through an innovative and high-quality design process. Therefore, we adhere to proven internal standards and our design team has good organizational skills and know-how to deliver excellence.

## Simulation Systems

Simulation is a super diverse category of video games, generally designed to closely simulate real-world activities. The simulation game attempts to copy different activities from real life in the form of a game for different purposes such as training, analysis, prediction, or entertainment. Usually, there are no precisely defined goals in the game, and the player is allowed to freely control the personality or environment.

### Well-known examples include

war games, business games, and role-play simulations. Among three basic types of strategic, planning and learning exercises: games, simulations, and case studies, a number of hybrid games, including simulation games that are used as case studies, can be considered. Comparisons between the advantages of simulation games and other teaching techniques were made by many researchers and a number of comprehensive reviews were published.
